HOW TO APPLY

PRE PAINTING STEPS

PLASTER New masonry surfaces must be allowed to cure completely for best results. It is recommended to allow 28 days as curing time for new masonry surfaces. **CLEANING** Ensure that surface

is completely free from all dirt, loosely held plaster, powdery residue, oil, grease or any other contamination. Any previous growth of fungus, algae or moss needs to be removed thoroughly by vigorous wire brushing and cleaning with water. One coat of SmartCare BioBlock is recommended to prevent further growth of algae, fungus or moss.

FILLING FOR CRACKS For filling cracks upto 3mm use Asian Paints Smart Care Crack Seal. FILLING FOR HOLES & DENTS

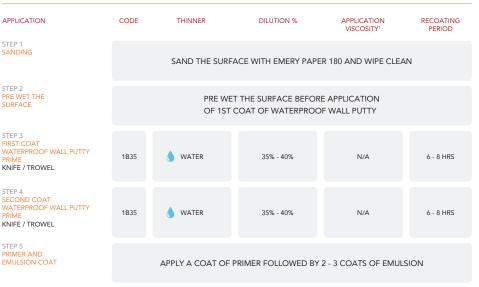

In case of dents and holes use a mixture of white cement and fine

sand in the ratio 1:3 PRE WETTING Pre wet the surface with water before application of 1st

APPLICATION PROCESS

coat of Putty Prime . Also, it is recommended to prevent the surface before the 2. Recoat period is quoted for 25°C and 50% Relative Humidity, these may vary under different conditions.

ADDITIONAL INFORMATION

POST PAINTING CARE

It is important to apply a coat of Asian Paints Primer over Waterproof Wall Putty Prime before application of emulsion

TECHNICAL DETAILS

- a. Drying time: Surface dry time 30 min
- b. Pot life: To be used within 45 minutes

PRECAUTIONS

- > Do not apply the material without pre wetting the surface for the 1st coat
- Preferably use a Putty 'mixer for effective and quick mixing with water >
- Pre wet the surface before application of the 2nd coat of Putty Prime >
- Ensure the material is mixed homogeneously with water and allowed to stand for 5-10 mins > before application
- Do not sand the material vigorously with Emery Paper otherwise it will reduce the strength of the material
- Do not apply the material to fill cracks >
 - Though the material is non-toxic, care should be taken to avoid dust inhalation while mixing and handling
